

1) What tag is used to create a form? Name its attributes.

Ans: The `<label>` tag, and the `<input>` tag.

2) "Get" method is the most secure way of submitting data. Yes or No? State reason.

Ans: The "Get" method is a less secure way of submitting data because the data is sent as part of the URL. "Get" should never be used to send passwords or other sensitive information.

3) How are label and input connected?

Ans: A label has the "for" attribute which connects it with the input element.

4) Does placeholder get submitted to the server?

Ans: No, as soon as the user starts typing, it disappears.

5) How would you make an input required?

Ans: You can add a "required" attribute, therefore the browser won't let the user submit without adding this value.

6) How would you make an input read-only?

Ans: You can add the "readonly" attribute, therefore the user cannot change it.

7) What tag is used to create groups in a select list?

Ans: The `<optgroup>` tag and `<option>` tag.

8) What is the difference between Radio Buttons and Check-boxes?

Ans: Radio is for singular value checkboxes, which means the user can only select one. Unlike radio, checkboxes allow multiple selections.

9) What tag is used to create summary input? Give Example.

Ans: The `<textarea>` tag.

10) The form is of no use, without which element?

Ans: The "action" element and the "method" element.
